EDUCATION

University of Toronto | Toronto, Canada — Aug. 2026 – Nov. 2027
Master of Mathematical Finance
Relevant Fall Coursework: Information Technology; Data Science; Pricing Theory; Dynamic Data Science; Risk Management; Numerical Methods for Finance; Machine Learning for Finance.

Universidad de Granada | Granada, Spain — Sept. 2021 – July 2026
Five-year Double Degree in Mathematics and Computer Science
ShanghaiRanking 2025 by subject: Mathematics #51–75 worldwide; Computer Science & Engineering #76–100 worldwide
Relevant Coursework: Probability; Statistical Inference; Computational Statistics; Numerical Methods; Mathematical Modelling; Functional Analysis; Fourier Analysis; Topology; Machine Learning; Artificial Intelligence; Metaheuristics; Advanced Models of Computation; Data Structures and Algorithms; Databases.

Università degli Studi di Salerno | Salerno, Italy — Sept. 2023 – July 2024
Erasmus+ Academic Exchange
Completed one academic year of coursework in mathematics and computer science, adapting to a new academic system while working in multicultural teams and developing greater independence abroad.

Certifications: Strategic Management of Risk, Aarhus University (July 2025); Advertising and PR, European Summer School, Prague (July 2024); PLIDA Certificate in Italian, CEFR B2 — 114/120 (April 2026); Cambridge English Advanced, CEFR C1, Grade A (October 2025).

SKILLS

Python • C++ • SQL • Git • Linux • NumPy • pandas • scikit-learn • PyTorch • Time Series Analysis • Portfolio Backtesting • Optimization • Probability and Statistics • Numerical Methods Machine Learning • Data Visualization • Excel • Power BI • Testing • Collaboration • Communication

WORK EXPERIENCE

Scotiabank | Toronto, Canada — January 2027 – April 2027
Incoming Global Analytics & Financial Engineering (GAFE) Intern, Global Banking & Markets
- Selected for a quantitative role supporting derivatives pricing, model development and trading-desk analytics within Global Capital Markets.

ACADEMIC PROJECTS

TDA Finance Mapper — Topological Data Analysis for Portfolio Construction — 2026
Supervised by David Ruiz Aguilar and Daniel Molina Cabrera, University of Granada.
Developed a Python package for my final degree project applying Topological Data Analysis to financial market data for market-regime analysis and portfolio construction. I built a reproducible research pipeline using Mapper, persistent homology features, causal backtesting, transaction costs, and benchmark comparisons against classical portfolio strategies. The project resulted in a documented API, Sphinx documentation, experiment scripts, and a package published on PyPI as tda-finance-mapper.

Minimum Differential Dispersion Problem — Metaheuristics in C++ — 2025
Completed for Metaheuristics, University of Granada. Instructor: Prof. Daniel Molina Cabrera.
Implemented and evaluated trajectory-based metaheuristics for the NP-complete Minimum Differential Dispersion Problem, including Basic Multi-Start, Iterated Local Search, Simulated Annealing, hybrid ILS-SA, and GRASP variants with local search. I designed the experimental workflow using MDPLIB benchmark instances and CMake, comparing solution quality and computational behaviour across methods.

Skin Lesion Classification — Deep Learning Benchmarks — 2026
Completed for Computer Vision, University of Granada. Instructor: Prof. Pablo Mesejo Santiago.
Collaborated on a comparative deep learning study for melanoma, nevus, and keratosis classification using the ISIC 2017 dataset. I contributed to training and evaluating convolutional neural network and transformer-based architectures, including EfficientNetB4, Inception-ResNet-v2, ViT, and ViT with DINO, producing reproducible pipelines, metrics, and a written technical report.
